

TENNESSEE

BED

The geometry of the Tennessee model is built entirely on rounded shapes, following contemporary design trends. The headboard and side rails feature a gently curved arc, creating a visual effect of a cozy sleeping capsule.

TENNESSEE BED

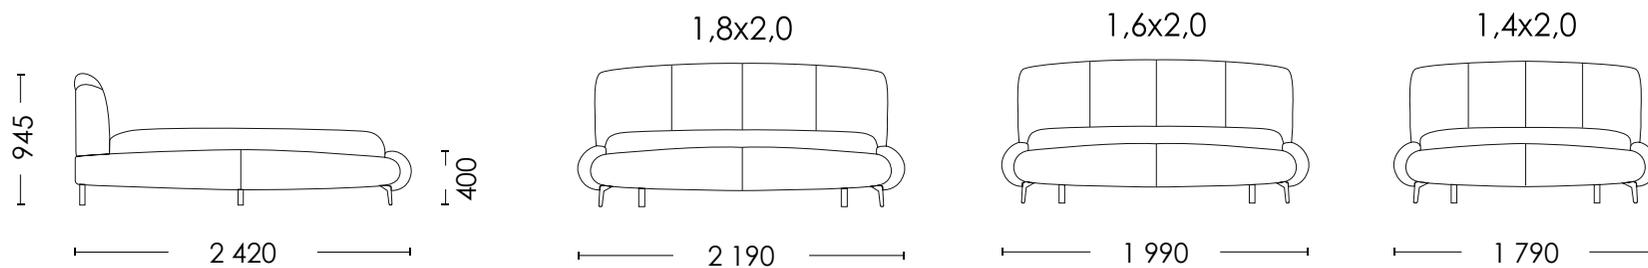

The softness of the rounded shapes is beautifully balanced by decorative vertical stitching, which adds subtle structure and highlights the bed's harmonious proportions.

Tennessee is an ideal choice not only for minimalism and Scandinavian interiors—where simplicity and airiness matter—but also for Japandi, Wabi-Sabi, and modern classic styles, enhancing the atmosphere of calm and harmony.

SCHEME

TENNESSEE BED

The entire construction is supported by tall metal legs (16 cm). Their advantage is clear: they provide optical lightness while maintaining stability and durability.

Practicality also plays an important role — the elevated base makes cleaning easy, and a robot vacuum can reach every area under the bed without obstacles.

The internal structure is equally impressive. At its core is a frame made of coniferous wooden beams, ensuring rigidity and stability.

Soft sections of the bed are formed using polyurethane foam, allowing for the desired shapes without compromising structural integrity.

Another important element is the E1 particleboard base, equipped with ventilation holes that improve air circulation and maintain a healthy microclimate around the mattress.
